Short Form Questions

- Q1. (a) True; independent $\implies P(A)P(B) = 0 \implies P(A) = 0 \vee P(B) = 0$
(b) True; always true for $P(A \cap B) = 0$
(c) True; $P(A)P(B) > 0 \implies$ not independent
(d) True; $P(A \cup B) = 1 + P(B) \implies P(B) = 0$
- Q2. (d); $\frac{\binom{4}{2}\binom{4}{1}\binom{2}{1}}{\binom{10}{4}} = \frac{8}{35}$
- Q3. (c); $P(A)P(B) = 0.28 \neq 0.3 = P(A) + P(B) - P(A \cup B)$
- Q4. (a); No ticket at camera 1: $0.6 + 0.4(1 - 0.5)$, no ticket at camera 2: $0.6 + 0.4(1 - 0.75)$ then $0.8 \cdot 0.7 = 0.56$
- Q5. (a) $\frac{4\binom{13}{5}}{\binom{52}{5}} \approx 0.001981$
(b)

Long Form Questions

- Q1. (i) $\binom{30}{5} = 142506$
(ii) $\frac{\frac{23}{5}}{142506} \approx 0.2361$
(iii) $\frac{\frac{23}{5} + \binom{7}{1}\binom{23}{4}}{142506} \approx 0.6711$
- Q2. (i) $P(A \cap B) = 0.4 + 0.5 - 0.6 = 0.3$
(ii) $0.6 - 0.3 = 0.3$
(iii) $1 - 0.6 = 0.4$
(iv) $P(B \mid A) = \frac{0.3}{0.4} = 0.75$
- Q3. (i) $0.01 + 0.025 = 0.035$
(ii) $P(II) = 0.5$
(iii) $P(II \cap C) = 0.5 - 0.025 = 0.475$
(iv) $P(I \cap C) = 1 - P(II \cap N) = 1 - 0.025 = 0.975$
(v) $P(N \mid I) = \frac{0.01}{0.5} = 0.02$
(vi) $P(I \mid N) = \frac{0.01}{0.035} \approx 0.2857$
